

“ There are hidden compromises built into fuel and oil additives. But, what would happen if a development team were tasked with creating products that must only use the very best technologies and components regardless of cost? **Well, now we have.**”

Oilsyn®

Diesel Race DNA Ultimate Street-Legal Power Upgrade

Up to 7 Point Increase in Cetane.
Compatible with Diesel Pump Düse (PD) and Common Rail (CR) Engines.

Diesel Race DNA converts regular diesel into a premium RACE diesel fuel by maximising available engine power from a combination of cetane improver, proprietary ester lubricant, and combustion catalyst.

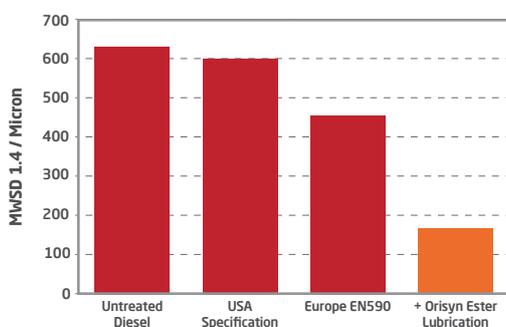

2-Ethylhexyl Nitrate (2-EHN) is the worldwide standard for raising the cetane number in diesel fuels and is what differentiates regular from Super diesel fuel. At Oilsyn, we only use the finest purity 2-EHN in our diesel formulations, raising the cetane number by as much as 7 points.

Oilsyn's Orisyn proprietary ester-based lubricant outperforms conventional diesel fuels lubricants or 2-stroke oil used as a diesel additive. Orisyn lubricates the upper cylinders for enhanced performance whilst protecting the high pressure fuel injection systems from low lubricity, low Sulphur (USLD) fuels.

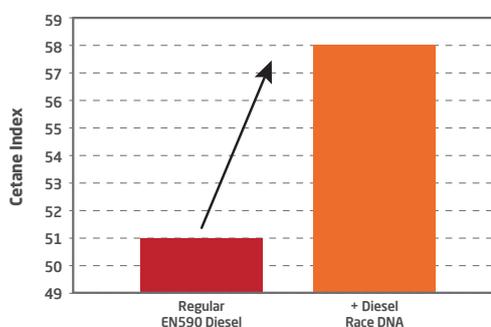

HFRR is reduced by as much as 70% significantly reducing wear and the engine and fuel system is notably quieter. Orisyn is also safe for the crankcase oil unlike conventional non-acid based diesel lubricants. In fact, it can enhance lubrication in cases where a DPF regeneration forces fuel to enter the crankcase.

Orisyn Ester Lubrication Technology

7 Point Increase in Cetane

Oilsyn®

Diesel Race DNA

Ultimate Street-Legal Power Upgrade

Oilsyn's Fueloxy combustion catalyst helps maximise combustion efficiency ensuring all of the fuel is converted to usable energy during the combustion process resulting in improved engine torque, lower exhaust emissions and a cleaner DPF.

Diesel Race DNA is suitable for all older and modern diesel engines running pump diesel fuel.

*"This is like
Super Diesel on Steroids"*

"What is the lube?"

This is the quietest BMW 6 cylinder diesel I have ever heard."

"I was a fan of using 2 stroke oil..."

but now understand the downsides and what it is really doing to make the engine sound quieter. This product reduces unwanted injector noise and the performance difference is something else."

FUNCTIONS

BENEFITS

Directions

Remove seal, pour required amount into fuel tank and then add fuel.

Standard Dosage: 1ml per 1L of fuel.

Higher Performance: 1.5ml per 1L of fuel.

Maximum Performance: 2ml per 1L of fuel.

Use continually for best results.

Packaging

1L, 5L and 200L Drums.
